FOUNDATION & PROGRESS

Established in August **2017**, Language Hub continues in the university style of teaching promoted by its founder Josef Milon.

With several years of experience in the educational business, Language Hub's main goal is to share knowledge of languages with students, and build a reputable institution based on cooperation with experienced teachers and publishing houses, and with usage of up-to-date teaching techniques, sophisticated study materials, and with help of computer systems for managing and supporting the process of education.

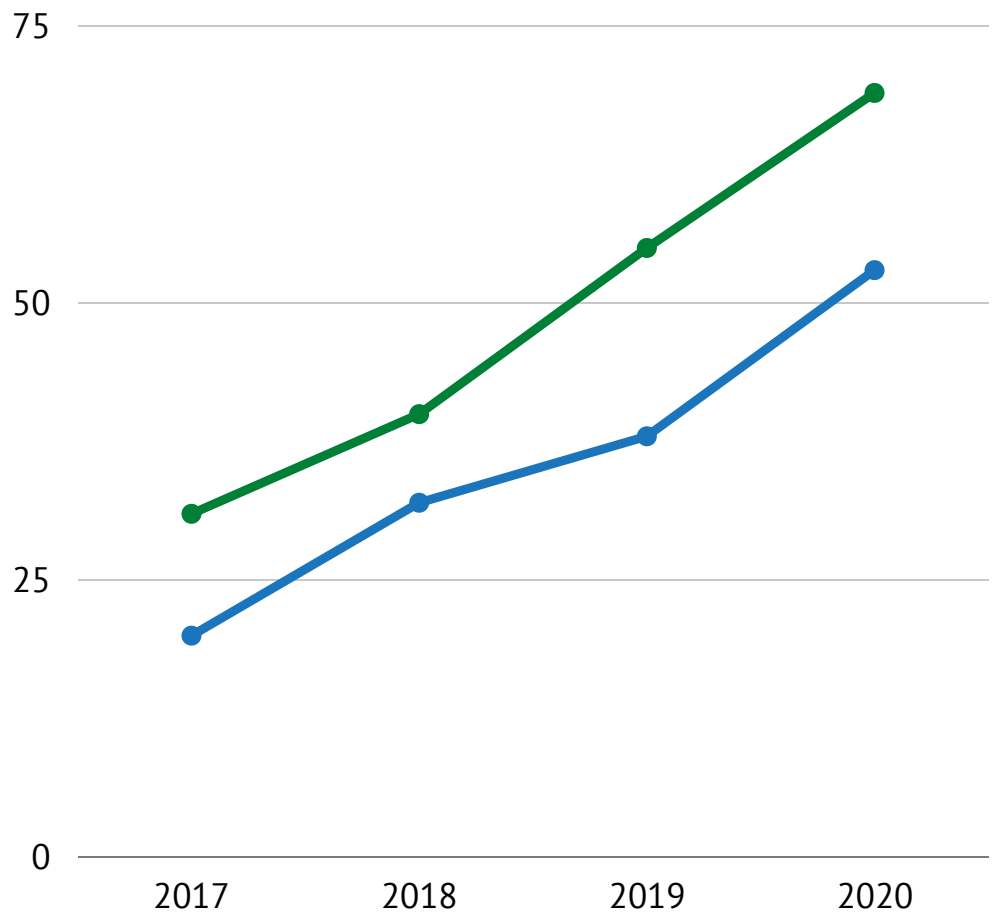

We want to participate in building a knowledge society where language skills play an important and irreplaceable role.

LEARNING MANAGEMENT SYSTEM

We use Moodle to manage a complete portfolio of school activities.

Moodle is an open-source database learning management system that helps us to:

- manage our courses
- share materials with students
- keep electronic attendance
- assign homework
- communicate
- use a mobile app to access course content

SYSTEM FOR VIRTUAL CLASSES

We use BigBlueButton to offer students a robust tool for attending classes online.

BigBlueButton is an open-source videoconferencing system we use for organizing online education.

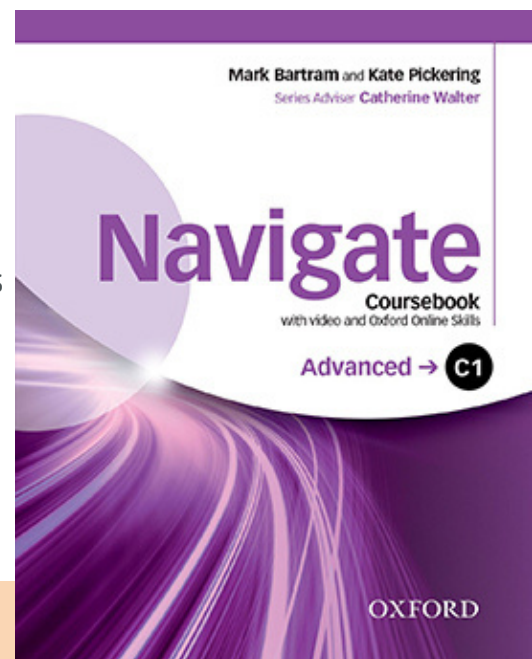

Key characteristics:

- HTML5 technology
- High-quality audio
- Mobile access
- Whiteboard
- Chat & Shared notes (both exportable)
- Collaborative tools
- Connection to Moodle (one user account = one authentication to access both systems)

1000+ online lessons took place at Language Hub through BigBlueButton from 2019 to 2020.

WE USE THE BEST MATERIALS

Macmillan
Oxford University Press
Cambridge University Press
ALMA Edizioni
Hueber Verlag
Difusion
Akropolis

“*One specialist writes a book, another specialist uses it to teach.*”
